FALL 2021 NEWSLETTER HERE COMES THE BOOSTERS

Flu and COVID-19 流感和新型冠狀病毒

Who should get the flu vaccine for the 2021-2022?

Annual flu vaccination is recommended by CDC for everyone **6 months and older**, with few exceptions.

What is the difference between flu and COVID-19?

Flu and COVID-19 are both contagious respiratory illnesses, but they are caused by different viruses. People can be infected with both a flu virus and the virus that causes COVID-19 at the same time. In general, COVID-19 seems to spread more easily than flu and causes more serious illnesses in some people. Compared with people who have flu infections, people who have COVID-19 can take longer to show symptoms and be contagious for longer.

Can I get a COVID-19 vaccine and a flu vaccine during the same visit?

Yes, you can get **a flu vaccine** at the same time you get **a COVID-19 vaccine** (**or a COVID-19 booster shot**). Even though both vaccines can be given at the same visit, people should follow the recommended schedule for either vaccine: If you haven't gotten your currently recommended doses of COVID-19 vaccine, get a COVID-19 vaccine as soon as you can.

2021-2022年的流感季,哪些人應該接種流感疫苗?

疾控中心建議年齡在6個月或以上的人士都應接種年度流感疫苗,少數情況除外。

流感病毒和新型冠狀病毒有什麼區別?

流感病毒和新型冠狀病毒都是呼吸道傳染疾病,但它們是由不同的病毒引起的。 **人們可能同時感染流感病毒和新型冠狀病毒**。 一般來說,新型冠狀病毒似乎比流感病毒更易傳播,並在部分人中出現更嚴重的病症。 與感染流感的人相比,感染新型冠狀病毒的人可能需更長時間才會出現症狀並具有傳染性。

我可否同時打流感疫苗和新型冠狀病毒疫苗?

可以,你可以在接種**流感疫苗**的同時,接種**新型冠狀病毒疫苗**(**或新冠加強針**)。但雖然你可以同時打新型冠狀病毒疫苗及流感疫苗,你仍應遵守各種疫苗的接種建議指引,如果你還沒完成新型冠狀病毒疫苗的接種,請盡快安排接種。

Stay Healthy By Getting a Free Flu Shot

You are recommended to get a flu shot at no cost to protect you and your family.

You could see your doctor now for flu shot. Don't delay, make an appointment today!

為了確保您的健康安全

我們建議您接種免費流感疫苗以保護您和您的家 人。**您可以約見家庭醫生,接種流感疫苗針**。 不要拖延,今天就去預約!

Your Choice. Your Health. Our Mission. 你的選擇,你的健康,我們的使命。

新冠新階段

—— 陳鴻傑醫生專訪

問: 為何 Delta 變種病毒比之前的變種病毒更具傳染性?

答: 高傳染性可能由於此變種病毒擁有在體內快速複製的能力。研究還發現,感染Delta變種的人比感染原始病毒的人更早攜帶可檢測到的病毒(暴露在Delta病毒後只需4天,而暴露在其他變種病毒後一般需6天),另一項研究發現Delta變種保持傳染性的時間更長(Delta 變種可持續18 天,其他變種病毒一般只持續13 天)。

問: 感染Delta變種病毒和感染原始病毒的症狀有何差別?

答: 感染Delta變種病毒的症狀其實和原始病毒差不多。但醫生也發現兩者之間有一定區別。發燒和咳嗽在兩種感染上都普遍存在。但頭痛,鼻竇充血,喉嚨痛,流鼻涕,以及嚴重打噴嚏等症狀更常見於Delta變種感染患者。而失去味覺及嗅覺,被認為是感染原始病毒的標誌性病症,在Delta變種感染者身上則沒那麼常

見。

問: 疫苗是否會對變種病毒無效呢?

答: 當一種新的變種出現,最大的問題就是它是否會突破疫苗的保護。但實際上疫苗生產出來最主要的作用就是:預防重症,住院以及死亡。 疫苗的作用不僅僅是觸發中和抗體的產生。 它們還可透過 T 細胞和記憶 B 細胞令身體獲得免疫力。 因此,變種病毒很難令疫苗失效。

COVID-19 update

—— Interview with Kenneth Chang, M.D.

Q: How is the Delta variant more contagious than previous variants?

A: The high infectiousness could be due to its ability to **replicate rapidly** in the body. A study found that people infected with the Delta variant carry the detectable virus earlier than with the original virus (**4 days vs 6 days after exposure**) and another study found that they remain infectious for a longer period of time (**18 days versus 13 days**).

Q: What are the differences between the symptoms of the Delta variant and the original coronavirus?

A: The Delta variant may look and act very similar to the original strain of COVID-19, but doctors have noticed some differences. **Fever** and **cough** are present in both types, but **headaches**, **sinus congestion**, **sore throats** and **runny noses** all appear to be more common with the Delta strain. **Excessive sneezing** is also a symptom. **Loss of taste and smell**, **considered** a hallmark symptom of the original virus, may happen less frequently.

Q: Will the variants make the vaccines useless?

A: Whenever a new variant appears, the big question that follows is whether it will bypass the vaccines. The vaccines perform what they were designed to do: **prevent severe illness**,

hospitalization, and death. Vaccines do a lot more than just trigger the production of neutralizing antibodies. They also grant immunity through T cells and memory B cells. As a result, it is difficult for a variant to render the vaccines useless.
