COVID-19 Vaccination FAQs

Will the vaccine give me COVID-19?

No. The vaccine does not carry live viruses, so it cannot infect you.

Do I need to have a COVID-19 test before I get the vaccine?

No, a COVID-19 test is not needed before getting the vaccine.

Is there any reason I shouldn't get the vaccine?

Based on age, health conditions, or allergies, you may need to consult with your provider first if you should get the vaccine. Scan the QR code on the left for more information.

Do I have to get a vaccine if I already had COVID-19?

You may be advised to get a COVID-19 vaccine even if you have been infected with COVID-19 before.

Can I still get COVID after I get the vaccine?

Both vaccines are shown to be highly effective in preventing COVID-19 (90-95%), but it is possible to still get COVID-19 after vaccination.

Do I still need to wear a mask or stay socially distant?

Yes. After vaccination, you still need to protect yourself by wearing masks, staying 6 feet away from others, avoiding crowds and poorly ventilated spaces, and washing your hands often.
