

How High Cholesterol and Blood Pressure Affect the Eyes

High Cholesterol and Eye Disease

Retinal vein occlusion occurs when excessive cholesterol is built up in the blood vessels of the eyes and causes blockages in the retina. It can build up pressure and cause pain in the eyes in severe case. It may end up with blurring or loss of vision.

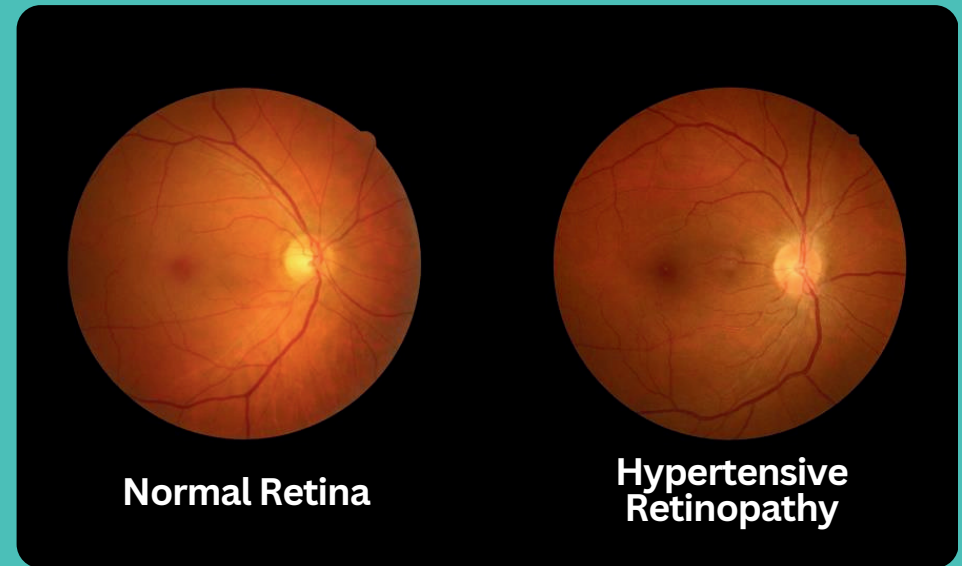

High Cholesterol Leads to Eye Diseases

How High Blood Pressure Affects the Eyes

High blood pressure (also known as hypertension) can cause damage to the blood vessels in the retina, which is the area at the back of the eye where visual images are formed. It may end up with blurring or loss of vision.

High Blood Pressure Leads to Eye Diseases

Consult your primary care doctor to prevent or manage blood pressure and cholesterol!
